GOAL

To work in a funny and interesting environment where I can learn from others and others can learn from me.

WORK EXPERIENCE

2014–present   Senior Software Test Engineer, XING NETWORKING — Barcelona

XING Networking - Spain

.As a Software Test Engineer I'm in charge of designing, mantaining and performing all related tasks to Testing in the project I'm working on. We are using Ruby on Rails as a backend framework and Backbone-Marionette as a main Front-end framework. The testing is done both manually and automatically using Jenkins as a CI. The Frameworks used for testing in our project are: RSpec, Capybara and Jasmine for the Javascript test suite.

2012–2013   Senior QA Engineer, WUAKI.TV — Barcelona

Wuaki.tv

VOD service on-line available in multiple devices. As a QA Engineer I'm in charge of developing and maintaining the automated test suite built with RSpec and Capybara for the Web Site and in Jasmine for the TV devices. One of our main goals has been to improve the execution time of our test suite by reducing it almost a 30% . Another task our dept. has done is to improve and increase the release frequency (from once per month to twice per week) through the usage of different environments where to test the isolated feature, without the concerns of an integration environment, in that way we can ensure the value of the feature and let the integration tests do their job.
